

Adjacent areas of native vegetation:

Note if any areas of native vegetation adjoin the property or are located in close proximity including both public conservation land and areas on other farms. Where possible include these on the farm map (below).

General trends in native birds:

Note if bellbird, tui, kereru, karearea, and ruru are generally seen / heard around the farm and whether their populations seem to be declining, stable, or increasing.

General trends and animal pests and weeds:

Note any particular animal pests or weeds that affect the farm or may potentially affect the farm in the near future and whether they are in decline, stable, or increasing.

Farm map: Mark and number discrete areas of native vegetation on an aerial photo of your farm and then fill in the following assessment sheets for each native vegetation patch.
