

LOOKING FOR INFORMATION?

WWW.BEEFLAMBNZ.COM /KNOWLEDGE-HUB

FREE LUCERNE AND AGPEST TEXT ALERTS

As well as traditional resources, we also offer other services. Our lucerne texts—provided by lucerne expert Professor Derrick Moot—keep you informed on what to look out for in your lucerne paddocks.

This service also exists for weeds and pests—AgPest Texts alert you to seasonal threats. You can even ask questions by replying to the texts.

To sign up for either of the text services email resources@beeflambnz.com

The B+LNZ Knowledge Hub is your one stop shop for information for your farming business.

Facing challenges or looking to do something new in your business? The Knowledge Hub has a huge range of material from industry experts to help you choose what works for you.

Hard copy or digital: choose from books, factsheets, videos, podcasts, interactive online modules and more.

SUBSCRIBE TO OUR YOUTUBE CHANNEL FOR NEW VIDEOS DELIVERED TO YOU

FIND B+LNZ PODCASTS

Listen to interviews with farmers and experts on key farming issues. Available on the Knowledge Hub or search **Beef + Lamb New Zealand** on a podcast app.

E-DIARY OUR WEEKLY NEWSLETTER

Stay informed on what is happening in your region by subscribing to our weekly newsletter, the e-Diary. Your B+LNZ extension manager will keep you up to date on events, news, and resources relevant for you.

To subscribe please email enquiries@beeflambnz.com

NO INTERNET? NO PROBLEM

We can provide hardcopies and USB drives of resources by post.

WORKSHOPS FOR FARMERS

Our workshops help farmers find solutions for their farm. With topics ranging from Farm Plans to Body Condition Scoring there is something for everyone.

Find out more at beeflambnz.com/your-levies-at-work/workshops-farmers

B+LNZ organise these hands-on workshops regularly and based on demand. The workshops are free to all sheep, beef, deer, and dairy farmers.

Email your B+LNZ Extension Manager or enquiries@beeflambnz.com to express your interest in having one of those workshops in your region.

ANIMAL MANAGEMENT

Beef Cow Body Condition Scoring—The critical elements of condition scoring in beef cows and management applications.

Ewe Body Condition Scoring—A quick, easy and low-cost management tool that compares sheep purely on condition.

Better Beef Breeding—How to make the best use of genetic information when purchasing bulls for breeding purposes.

Better Sheep Breeding—How to assess the genetic merit of rams, and identify breeders that will help you achieve your objectives, to improve your flock's performance.

Growing Great Lambs—Efficient lamb production and feed use, which ultimately translates into profit.

FeedSmart—Assess the quality of feed and estimate its metabolisable energy. Become a star at pasture management.

Wormwise—The latest information and research on internal parasite control is presented.

BUSINESS AND STRATEGY

Farm Safety Management System—This workshop provides you with a Farm Safety Management System. This gives you a process for identifying and managing hazards and risks and 90% of your paperwork already done.

Farm Ownership and Transition Workshop—A workshop series that takes farm businesses through the transition and succession of their farm business.

Protecting your Patch Workshop—Farmers will leave the workshop with a clear understanding of biosecurity interventions they need to take within their own operation and the importance of excellent on-going biosecurity practices for their industry

Generation Next Workshop—This programme is designed to nurture, assist and encourage the current and future farmers within our sector.

ENVIRONMENT

GHG Calculator and Action Plan Workshop—Farmers leave this three hour workshop with an understanding of where domestic climate policy is landing, their own properties' greenhouse gas emissions numbers, and a GHG Action Plan – i.e. having contributed to the sector meeting the He Waka Eke Noa 2021 and 2022 requirements.

Trees within Farms—Opportunities to integrate trees within farms to benefit sheep and cattle farming and the farm environment, and at the same time generate a return from production forestry, from the ETS, and/or localised tree-planting or land-retirement funding programmes.

Freshwater—This interactive workshop will help to introduce you to some simple tools to measure key indicators of freshwater quality and ecosystems.

Winter grazing—This workshop brings together all the winter grazing resources developed in recent years around managing livestock and crops to minimise the environmental impacts of this practice.

Farm Plan: Environment Module—Workshops with a strong practical focus, covering soils, freshwater, biodiversity, climate change, forage cropping and more.

The strength of a workshop approach is access to expert knowledge and the ability to share with and learn from other farmers addressing the same issues as you. The technical content of the environment module will be delivered through two, five-hour workshops with no cost to farmers to attend. By attending these workshops farmers will be able to create much of their environmental farm plan. If you're interested in doing a farm planning workshop, head over to www.beeflambnz.com/farmplan

Community Catchment Groups Workshop—This Catchment Community Group Workshop will help your group identify your vision and start forming a plan to realise that vision. The workshop covers: the what and why of Catchment Community Groups, what makes groups tick?, Group structure, Forming a plan – The Catchment Action Cycle, The coordinator's role, and Further resources and information.
