

Winter Flood Bulletin

First responses

- Ensure the safety of family and staff
- Move stock to safety, shelter and water and make sure they can't wander.
- Check power and phones. Report outages
- Check on neighbours—do they need help or can they help you?
- Check buildings at risk, feed stacks. Move equipment and feed to higher ground
- Move stock to a stand-off area so that they do not damage good pastures
- Feed stock
- Check roads and tracks, bridges, culverts
- Clean up houses
- Look after family, staff, neighbours. Accept help if you need it
- Assess damage to water supply and reticulation system. Which troughs are contaminated with silt and will need cleaning?
- Assess damage to access lanes, tracks, gateways, culverts and fences. What clearing away of flood debris is needed?
- Assess available non-flooded pastures and other undamaged feed reserves
- Contact local council, flood relief co-ordinator, Beef+Lamb New Zealand staff, DairyNZ staff, Federated Farmers, MPI, or other resource providers
- Talk to bank manager, insurance company
- Accept help when offered, and ask for it if you need it.

After assessing damage

- List what you need to do in priority order
- Relocate stock to safe ground or other region if needed
- Decision tree for flood damaged farms (page 2)
- Feed budgeting (below)
- Keep informed from locals, neighbours and regional with updates and information.

Feed budgeting

A guide to feed planning for sheep farmers is available from B+LNZ by free phoning 0800 233 352.

- Assess the current feed resources
- Assess winter crop paddocks and estimate yields
- Do a supplementary feed inventory
- Buy in feed if you need too
- Be realistic, how many stock units can you feed for the remainder of the winter?
- Manage grazing of wet soils (through decision plan) to minimise the risk of pasture and soil damage which will impact subsequent growth
- Consider other options
 - Graze stock elsewhere
 - Get rid of culls.

What do my stock need?

*Assuming lambing in mid-September, 65kg mating weight.

kgDM/hd/day	Jul	Aug	Sep	Oct
Ewes (single)*	1.3	1.5	1.9	2.2
Ewes (twin)*	1.4	1.7	2.4	3.0
Ewes (triplets)*	1.5	1.9	2.6	3.5
Hoggets (mated)	1.5	1.5	1.6	1.9
Hoggets (dry)	1.1	1.2	1.4	1.6
R1 Cattle	6	6	6	6
R2 Cattle (450 kg)	8	8	10	10
Beef cows (in calf) maintenance	6	8	10	10
Dairy Cows	12	12		
Hinds	2.4	2.4	2.6	2.6
Wnr deer	2	2.6	4	4
R2 year stags	3	4	4.5	4.5

Decision tree to help with pasture programme

Use your feed plan to help determine the key elements of your pasture programme. While it is too late for major renovation now, it is important to determine how you will manage through spring with reduced pasture and/or fodder feed.

Some options used successfully by farmers in flood prone areas:

- **Talk to your fertiliser rep** to determine the best fertiliser options for your situation
- If the silt smells, and has a lot of thatch, mow it, cultivate the soil when dry enough and sow in either short term or long term pastures with clover.
